Ask me about: Prescribing in long-term care, comparative vaccine safety and effectiveness, artificial intelligence and machine learning

Daniel Harris, PhD, MPH is a geriatric pharmacoepidemiologist and health services researcher. Dr Harris' research aims to optimize medication and vaccine use for older adults living in the community and in long-term care. He applies a range of descriptive, causal, and predictive methodological approaches to understand how medications and vaccines are distributed throughout populations and to document their real-world safety and effectiveness. Dr Harris' work also explores the effects of health policies on medication and vaccine use. His research has been funded by the Alzheimer Society of Canada, Canadian Institutes for Health Research, National Institute on Aging, and pharmaceutical industry partners.

PRESS: "*The promise and challenges of dual vaccination*" (Global Health Press)

MARCH 14, 2024

Read at: [id-ea.org/the-promise-and-challenges-of-dual-vaccination/?utm_source=rss&utm_medium=rss&utm_campaign=the-promise-and-challenges-of-dual-vaccination](#)

In this context, a new study conducted by Daniel Harris, senior research scientist, and Vincent Mor, professor of health services policy and practice and the Florence Pierce Grant University Professor at Brown University, explores the adoption and variability of simultaneous COVID-19 and flu vaccinations. Supported by an IMPACT grant from the National Institute on Aging, their research expands on previous findings regarding the benefits of co-administered vaccines, examining whether these vaccinations are being adopted broadly and if any specific groups are being overlooked.

PRESS: *"Daniel Harris: Using a PhD in Epidemiology to Support Nursing Home Residents"* (Dalla Lana School of Public Health)

NOVEMBER 7, 2022

Daniel Harris will graduate with a PhD in Epidemiology at the November convocation. The American-born graduate got more than he bargained for when he first set his sights on a PhD in Canada studying antipsychotics among older people.
