**Ask me about:** Delirium, geriatrics, research

Dr. James Rudolph is a Geriatrician and palliative care physician who has spent his career improving care for older Veterans. He has developed several innovative tools for recognizing Veterans at risk and built programs to communicate, disseminate, and intervene to improve the experience of Veterans. At the Providence VAMC, Dr. Rudolph leads the THRIVE Center of Innovation, a Health Service Research Center that develops and disseminates innovations to Veterans at all stages of life's trajectory. He has been recognized as outstanding leader, mentor, and researcher who has presented his research

across the country and around the world. In his spare time, he is an accomplished runner and is working towards completing a half marathon in every state.

## THRIVE Goals

---

Improve Quality, Safety and Value of VA long Term Services and Supports

Improve Access and Equity of VA Long Term Services and Supports

Build the Next Generation of LTSS Researchers

## Research

---

Aging	Cognitive Function
Delirium	Heart failure
Medications	Function

*Veterans Administration studies show just how effective the COVID-19 vaccines are in preventing infection.*

*The VA has been looking at this since the very first vaccine went in to the arms of its nursing home veterans.*

*"The VA runs 134 nursing homes," said Dr. James Rudolph, who wears two hats. He directs a health services research center focused on long term.*
