Ask me about: Pharmacoepidemiologic methods,
target trials, medicare data

Kaley Hayes, PharmD, PhD is a pharmacoepidemiologist whose research aims to optimize the use of medications in older adults. She conducts pharmacoepidemiologic research using comparative drug effects studies and causal inference methods. Her work focuses on examining health outcomes for older adults treated with medications for chronic conditions, including osteoporosis, diabetes, and cardiovascular disease. Her work also quantifies the impacts of policy changes on medication and health services use.

THRIVE Goals

Be a co-investigator on a funded VA research grant

Write my first first-author paper using VA data

Support launching THRIVE!

Research

Pharmacoepidemiology	Geriatrics
Osteoporosis	Deprescribing
Long-term care	Chronic disease management
