

# The Role of Research Partnerships in Building a Learning Healthcare System: HSRD Initiatives

David Atkins, MD, MPH

Director, HSRD: “

# Why Doesn't Our Research Have More Impact?

- Research timelines >> Health system needs
  - First submission to publication > 6 years
  - System makes decisions without good information
- Mismatched priorities and incentives
  - Health systems want specific and timely answers based on “good enough” data
  - Researchers follow funders priorities, advance through publications, prioritize rigor over timeliness
- We don't plan for taking research to scale
  - Don't understand “value proposition” to system

# Recommendations from AHRQ/PCORI/VA/Kaiser Conference on Embedded Research

- Strengthen bi-directional relationships between research and C suite
  - Clarify system priorities and find alignment with research
- Build portfolio of projects/funding aligned with system priorities with mix of timing and deliverables
- Shared governance accountability between research and operations
- Expand toolbox of study designs to match system need
- Position research on continuum with QI
- Develop new career trajectories for embedded researchers

# What Problems Can Closer Partnership With Delivery System Solve?

- If you address a problem the system cares about, they will identify road blocks to your ideas and invest in implementing the solution.
- We need to distinguish problems of “evidence” – *WHAT* to do? – from problems of implementation or of resources – *HOW* to do it or How to *PAY* for it

# Models for Supporting Partnered Research

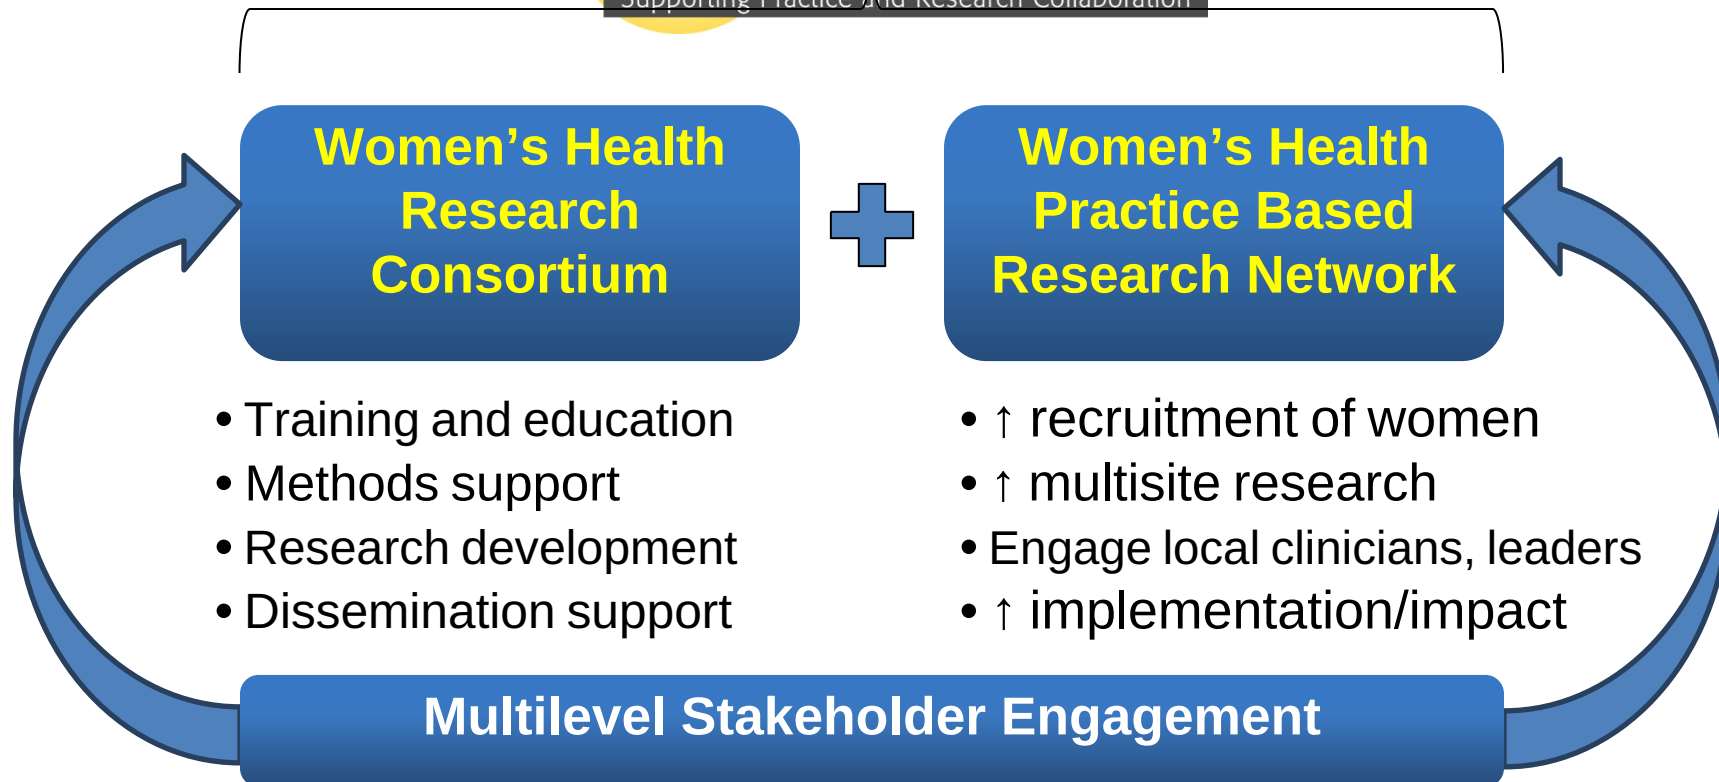

1. Research funded: **Research consortia**
2. **HSRD-funded** Researcher in Residence
3. **Research Into Veteran Results** initiatives
4. Imbedding research into ongoing initiatives
5. Partner funded and shared funding models: **QUERI Programs and Partnered evaluation centers**

# 1. Research Consortia

- Build a learning community across VA on high-priority topics – Opioids/Pain; Suicide; Access; Virtual Care
  - Improve coordination/communication with stakeholders
  - Monitor research portfolio and identify gaps
  - Improve collaborations to address gaps
  - Improve data to facilitate research
  - Communicate progress to multiple audiences

# Research: Health System Collaborative Network VA Women's Health Research Network

2010-present

VA policymakers, operations leaders, frontline staff, **women Veterans**

## 2. Researcher in Residence

### 2) QUERI Programs and Partnered evaluations

–Amy Kilbourne to cover

### 3) **Researcher in Residence**

- requests from program partners for help
- 3 month residency supported by HSRD
- Build relationship, understand data, address priorities

# 3. Imbed Research into Ongoing Initiatives Randomized Program Evaluations (RPEs)

- Identifying and intervening for Veterans at highest risk of **suicide**
- **Flexible community benefits** for high-risk older Veterans
- Risk tool + intervention for **high-risk opioid use**
- **Tele-dermatology** consults for remote Veterans
- Reducing unnecessary **PPI use**
- New screen for **interpersonal violence**

**VA** **STORM Patient Detail Report 2.0 BETA** Stratification Tool for Opioid Risk Mitigation This report has been revamped to improve efficiency and accuracy. If you experience any issues please contact us.

Data displayed has a 1-2 day lag from CPRS entry. This report is to be used along with the electronic medical record and direct discussion with the patient to help facilitate decision-making.

## 4. Research Into Veteran Results - RIVRs

- Each COIN selected a research-developed intervention ready for greater spread
- Up to 5 year funding to build partnerships and support for scaling to new sites
- You'll be hearing more about this in November

# Conclusions

- The goal of stronger research : program partnership is increasing impact of research on Veterans.
- Partnerships don't just happen – they need support to reduce communication barriers.
- We hope this curriculum will help you identify research questions that will make a difference.
- Research funders and academic systems also need to change to make this a viable model for rising researchers.
